

Functional UAT Checklist: Cookie Tracker Graph Demo

Phase 1: The Input Package (Mandatory)

Before starting an audit, the Pilot must provide the AI with the "Trinity of Context":

- **The Requirement:** Copy/Paste the exact row for your PoC from the Master Excel (Title, Story, Features, Stack).
- **The Source:** GDELT (synthetic), Synthetic first-party/third-party request graph
- **The Current State:** Screenshot of the current UI.

Phase 2: Visual Audit Review (VAR)

Ensure the dashboard adheres to the intended design and Master Protocol.

Layout Verification: Verify the layout splits into the intended grid structure (approx. 70/30 split between main visualizations and the right sidebar context/controls on large screens). — PASS

Color Scheme & Styling: Confirm the application correctly applies the dark theme (bg-slate-950, slate-colored borders and text, with blue, red, and green accent colors where appropriate). — PASS

Responsive Design: Check on Desktop (sidebar to the right or left depending on CSS grid order logic). — PASS

Phase 3: The Functional UAT Document

3.1 — Privacy Controls Simulation

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_001	Privacy Controls Simulation	Verify "Consent Toggle" is enabled by default on page load	The consent toggle renders in the enabled/on state by default, indicating all trackers are active on initial render.	pass
TC_002	Privacy Controls Simulation	Click the "Revoke Consent" toggle to off position	The toggle visually flips to off; the tracker graph and waterfall immediately reflect the no-consent state, hiding third-party nodes.	pass
TC_003	Privacy Controls Simulation	Verify icon/color change after revoking consent	Active tracker nodes dim or disappear from the graph; the consent status indicator changes from green to red.	pass
TC_004	Privacy Controls Simulation	Verify warning message after revoking consent	A yellow warning panel appears with a message indicating trackers are blocked and cross-origin data flows have been suppressed.	pass
TC_005	Privacy Controls Simulation	Re-enable consent toggle	The toggle returns to on; tracker nodes reappear in the graph and the waterfall updates to include third-party requests.	pass

3.2 — Request Waterfall

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_006	Request Waterfall	Verify waterfall renders on initial load	The request waterfall chart renders successfully on first load with at least 3 first-party entries visible without console errors.	pass
TC_007	Request Waterfall	Verify third-party tracker rows appear when consent is on	Rows for GTM, GA4, Meta Pixel and other consent-required trackers are visible in the waterfall with correct start/duration bars.	pass

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_008	Request Waterfall	Revoke consent and verify waterfall updates	After revoking consent, tracker rows (GTM, GA4, Meta Pixel etc.) are removed from the waterfall; only first-party rows remain.	pass
TC_009	Request Waterfall	Verify performance impact metric updates	Page weight and latency summary metrics (e.g., total size Kb, total latency Ms) decrease after consent is revoked, reflecting removal of tracker payloads.	pass

3.3 — Tracker Node Graph

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_010	Tracker Graph (Cytoscape/D3)	Verify tracker node graph renders on page load	The node-graph renders all 16 tracker nodes and their edges correctly on first render without layout overflow or missing connections.	pass
TC_011	Tracker Graph (Cytoscape/D3)	Hover over a tracker node to view tooltip	A tooltip appears on node hover showing: Label, Domain, Group, Cookie Count, Latency (ms), Size (Kb), and Consent Required flag.	pass
TC_012	Tracker Graph (Cytoscape/D3)	Verify cross-origin edges are visually distinct	Edges marked crossOrigin: true render with a different color or dashed style compared to first-party edges.	pass
TC_013	Tracker Graph (Cytoscape/D3)	Revoke consent and verify graph dims third-party nodes	Third-party nodes that require consent are visually muted (greyed out or hidden) after toggling consent off.	pass

3.4 — Domain Grouping Panel

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_014	Domain Grouping Panel	Verify domain group panel renders 4 groups	The 'Who Controls the Rail' panel shows Google, Meta, Amazon, and Oracle with their tracker count, cookie count, and market share.	pass
TC_015	Domain Grouping Panel	Verify Google group totals are accurate	Google group shows 4 trackers, 20 total cookies, and 28.6% market share as defined in the data source.	pass

3.5 — GDELT Events Feed

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_016	GDELT Events Feed	Verify GDELT panel renders all 3 events	The GDELT feed displays all 3 synthetic events with correct date, title, tone score, and theme tag (REGULATION, INDUSTRY_SHIFT, PLATFORM_POLICY).	pass
TC_017	GDELT Events Feed	Verify event tone scores are displayed	Each event card shows its numeric tone score (e.g., -4.2, -2.1, +1.8) with appropriate positive/negative color coding.	pass

3.6 — Download Functionality

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_018	Download Functionality	Click the 'Download Sample Data' button	A CSV file download is triggered with a descriptive filename (e.g., cookie_tracker_graph_sample.csv).	pass
TC_019	Download Functionality	Verify downloaded CSV content structure	The downloaded file contains columns for node ID, label, type, domain, group, cookie count, latency, size, and consent required.	pass

3.7 — Why This Matters Panel

Test Case ID	Test Category	Test Case	Expected Result	Pass/Fail
TC_020	Why This Matters Panel	Verify 'Why This Matters' panel is visible	The panel is visible on initial load and contains explanatory copy describing the Distribution & Demand rail and tracker ecosystem.	pass
TC_021	Why This Matters Panel	Verify panel is accessible without scrolling or via anchor	The panel is either above the fold or accessible via a clear navigation anchor/link in the header.	pass

Phase 4: Static Data Feeds Verification

4.1 — Synthetic Tracker Graph Feed

Render Check: Verify the tracker graph panel is visible and renders all 16 nodes across 9 tracker types (origin, cdn, first-party, analytics, tracker, ad-network, broker, social) with correct groupings.

4.2 — GDELT Global Events Feed

Render Check: Verify the GDELT panel is visible and displays all 3 synthetic news entries with their correct domains, dates, titles, tone scores, and theme tags (REGULATION, INDUSTRY_SHIFT, PLATFORM_POLICY).

4.3 — Domain Group Intelligence Feed

Render Check: Verify the 'Who Controls the Rail' panel correctly displays the 4 domain groups (Google, Meta, Amazon, Oracle) sourced from the /domain-groups API endpoint with accurate cookie counts and market share figures.
